EDUCATION

BACHELOR OF SCIENCE IN SOFTWARE ENGINEERING

August 2019 - May 2023 AMERICAN UNIVERSITY OF NIGERIA, AUN

Yola, Nigeria

MASTERS OF SCIENCE IN ARTIFICIAL INTELLIGENCE

September 2025 - Present NORTHUMBRIA UNIVERSITY (NEWCASTLE)

Newcastle, United Kingdom

CAREER OBJECTIVE

Empirical researcher and software engineer completing an MSc in Artificial Intelligence (September 2026). My dissertation quantitatively investigates how people accept, trust, and rely on AI generated recommendations. Fluent in Python with a full stack engineering background, and experienced in experimental design, mixed effects modelling, and natural language processing. Motivated by making AI safe and beneficial for society, and seeking to move into full time empirical AI research.

RESEARCH

MSc Dissertation — Investigating Acceptance Dynamics of Automated Recommendations ·

Northumbria University 2025 – 2026

Empirical study of how recommendation certainty and justification framing shape user trust and reliance on automated recommendations, in the music recommendation domain.

- Designed a 2x2 between-subjects experiment crossing certainty framing (high vs low) with justification wording (content-based vs discovery-based), producing 4 controlled conditions.
- Pre-specified all hypotheses and the full analysis plan in advance, using linear mixed-effects models to account for repeated observations within participants.
- Built the research apparatus end to end: a 60-track stimulus pool spanning 14 genres, manipulation wording for all 4 conditions, the survey instrument, and the institutional ethics self-assessment — approval granted.
- Maintain structured weekly research logs documenting issues, null results, and methodological decisions; preparing the paper for submission to ACM RecSys.

TECHNICAL PROJECTS

MOV.IE REC — Movie Recommender System - Python, deployed

- Built and deployed a live end-to-end recommender combining TF-IDF vectorisation over film metadata with collaborative filtering — **running on Render as a working public service rather than a notebook.**
- Owned the full 4-stage pipeline: data cleaning in pandas, similarity computation with **scikit-learn**, the **FastAPI** layer, and the interactive front end

PeerPods — Context-Aware Music Reflection Platform

- Built an interactive prototype and evaluation plan for an intelligent user interface, applying explainability principles to how recommendations are surfaced and justified to the listener.

EXPERIENCE

Snap Lens Lab Intern (Product Manager & AR Designer)

Snap Inc, London, United Kingdom - July 2026 - Present

- Lead production on an AR Lens with a 3-person team: own the scope, delivery plan, and the success metrics the concept is judged against.
- Presenting to Snap product and engineering teams — building the pitch narrative and communicating trade-offs to technical and non-technical audiences.

Product Manager (Remote)

Ariro inc, Lagos, Nigeria - February 2024 - May 2025

- Used engagement data to drive product decisions for a consumer music-streaming application over 15 months of sprint cycles, translating between engineering constraints and business stakeholders through requirements, QA, and release.

Product Designer & Engineer (Remote)

Epsilon Development Labs, Lagos, Nigeria - February 2024 - May 2025

- Used engagement data to drive product decisions for a consumer music-streaming application over 15 months of sprint cycles, translating between engineering constraints and business stakeholders through requirements, QA, and release.

TECHNICAL SKILLS

- **Research methods** Experimental & survey design, hypothesis testing, linear mixed-effects modelling, regression (logistic, MLR), research ethics, structured research logging
- **Languages & ML** Python (pandas, NumPy, scikit-learn), SQL, JavaScript; NLP (text preprocessing, TF-IDF, feature extraction); recommender systems (collaborative filtering, content ranking); generative AI tools for development productivity
- **Engineering** FastAPI, REST API design, React, SQL/SQLite schema design, Git & GitHub, code review, agile delivery
- **Communication** Academic writing for conference submission, stakeholder presentations, requirements documentation, technical writing on Medium

CERTIFICATIONS, AWARDS & ADDITIONAL INFORMATION

Google AI

Issued April 2026

CREDENTIAL ID 366Z97NI7B82

- Eligible to work in the UK without sponsorship; available full-time from October 2026; based in London and able to work from the London fellows workspace.
